

ULTIMA

Agricultural Post Harvest Production

The **ULTIMA Post Harvest Water Treatment Controller series** are professionally designed to provide consistent and reliable water quality control, while at the same time being flexible and user friendly.

From the smallest to the largest growers, an Ultima system is available to suit your needs.

ULTIMA Post Harvest

The ULTIMA Post Harvest Water Treatment Controller gives you the ability to monitor and control your water quality from the controllers 7 inch touch screen or over the web by continuously logging and graphing sensor readings and dose dump activity in easy to understand graphs. This allows the user to hone in and customise pump duties and dosing activity to minimise chemical usage and maximise efficiency.

Specifications

- 7" touch screen operation
- User friendly navigation
- Quick installation with no electrician required
- Upgradable to more advanced models
- Remote access options (Modem, Wi-Fi, Ethernet)
- USB port to download data or upload settings
- Historical trend graphs on screen
- Interlockable output functions
- Multilayer password protection
- Multiple timer options
- Automatic reporting
- Wide range of functionality
- Supports a wide range of chemistry

Parameters Controlled

- FAC (Free Available Chlorine)
- ORP
- Single pH
- Dual pH
- Backup chlorination
- Conductivity/TDS
- Add sensors or hardware to customise your PRO controller
